

VIBE CODING 101 / 01

Start with your own words

Purpose: Describe what you want to make without needing the right terminology.

How to use this page: A rough paragraph is enough. Include what sparked the idea and what you hope someone will be able to do. Do not ask AI to write code yet.

Project / date: _____

The messy version of my idea:

Who this might help: _____

What I hope they can do: _____

Time I can give this first version: _____

Budget and tools I already have: _____

What I do not know yet:

Example · fictional teaching scenario

A fictional learner wants a weekend packing checklist. Weather, sharing, and saved trips might come later. The first question is whether the list is for their own trip or for coordinating a group.

A useful check: Could someone explain your idea back without adding a feature you never asked for?

Next: Open the visual setup guide, then copy Prompt 1 into ChatGPT or Claude Chat.

VIBE CODING 101 / 02

Answer one useful question

Purpose: Make sure you and the AI are talking about the same project.

How to use this page: Ask for one question at a time. Answer in ordinary language. If the AI already has the answer, point it back to your notes. If it starts building, ask it to pause.

The most useful question the AI asked:

My answer:

What the AI understood correctly:

What I corrected:

A decision we still need to clarify:

My confirmed person and task:

Example · fictional teaching scenario

For the packing idea, the learner confirms: “This is for my own two-night trips. I want to tick off a short list and see what remains.” They do not need a shared travel app.

A useful check: Does the summary reflect your answers, or did the AI quietly choose a different audience or product?

Next: Confirm the corrected summary. Use Prompt 2 to narrow the first version.
